

Meet Shah

California, USA | 720-382-4065 | meetshah1799@gmail.com | linkedin.com/in/meet-shah7 | github.com/meeetshaaah

Summary

Software Engineer with 4+ years of experience building secure, low-latency backend systems in Java, Spring Boot, and AWS across fraud detection and telecom platforms. Skilled in event-driven microservices (Kafka, Redis), OCR/ML data pipelines, resilient APIs, and production observability, with end-to-end ownership from design through CI/CD rollout.

Professional Experience

Software Engineer II

SVR Telecom, California, USA

Apr 2025 – Present

- Digitized paper pole surveys for AT&T California, replacing manual entry across **10K+** poles and cutting survey turnaround **~60%** to support network planning.
- Engineered Spring Boot APIs and a React Native iOS/Android app, cutting per-pole data capture from **~15 min to ~4 min** and replacing paper logs.
- Architected an OCR and ML extraction pipeline on Kafka and S3 that turns scanned pole forms into structured records at a **95%+** field-accuracy target, defining field mappings and validation rules to unblock network planning.
- Established field-level precision/recall metrics and a confidence threshold that routes low-confidence reads to human review, targeting **<2%** errors on auto-accepted fields so model quality gates each rollout.
- Added schema validation and duplicate detection at ingestion, rejecting 6% of incoming pole records as malformed or duplicate before planning.
- Fortified APIs with rate limiting, circuit breakers, and load balancing, sizing capacity for **5K+** concurrent field users at **99.9%** availability, since crews upload in waves and one slow dependency could cascade.
- Cut incident detection time to minutes with Splunk/Grafana alerts on API errors, p95 latency, and failed syncs, and used app usage events for capacity planning.

Software Engineer

PRO-TEK Consulting, New Jersey, USA

Aug 2023 – Apr 2025

Client: Wells Fargo

- Fixed a race condition in fraud risk-score updates, where concurrent writes let conflicting scores through, by reproducing it and adding **optimistic locking (JPA)**, on a platform handling **2M+** daily transactions.
- Accelerated fraud alerts by tuning Kafka partitions, consumer groups, and batching, and caching hot lookups in Redis, cutting peak-hour consumer lag on **200K to 300K+ events/hour**.
- Reduced false declines **~15%** by building NumPy/scikit-learn features and supporting a feature-flagged canary rollout of model scoring, so a bad model push couldn't block legitimate payments.
- Designed Prometheus alerts on p95 latency, error rate, and consumer lag for the fraud scoring path, catching P1 issues earlier, and wrote Confluence runbooks for faster diagnosis.
- Wrote **200+** JUnit/Mockito unit and integration tests and automated Docker CI/CD with test gates, catching regressions before production and enabling fast rollback.

Junior Software Engineer

Ample Infotech, India

Jun 2020 – Jul 2021

- Resolved **20+** C++ indexing and parsing defects in the search module, so records stayed searchable after bulk updates.
- Lowered p95 search latency from **~1.8s to ~1.1s** by profiling slow lookups and parallelizing them with Java thread pools in the Spring Boot service, since sequential queries slowed under concurrent load.
- Eliminated **~3 hrs/week** of manual follow-ups by scheduling Python cron jobs for email alerts and stale-record cleanup.
- Streamlined deploys from **~45 to ~10 min** by Dockerizing the service and scripting Git-based EC2 releases.

Skills

Languages: Java, Python, C++, SQL, JavaScript

Frameworks & APIs: Spring Boot, Spring Security, JPA/Hibernate, React Native, REST APIs, OAuth 2.0, JWT, RBAC

Distributed Systems & Messaging: Kafka, Redis, Microservices, Event-Driven Architecture

Cloud & DevOps: AWS (EC2, ECS, S3, MSK, SQS, CloudWatch), Docker, Jenkins, CI/CD, Maven

Databases: MySQL, PostgreSQL, DynamoDB

AI/ML: NumPy, scikit-learn, OCR Pipelines, Model Evaluation (Precision/Recall)

Observability & Reliability: Prometheus, Grafana, Splunk, Rate Limiting, Circuit Breakers, Load Balancing

Testing & Tools: JUnit, Mockito, Postman, Swagger, Git, Jira, Confluence

Certifications

- AWS Certified Cloud Practitioner – Amazon Web Services
- Spring, Spring Boot, Hibernate Certification – Udemy
- Apache Kafka for Developers using Spring Boot – Udemy

Education

- Master of Science in Computer Science | Fairleigh Dickinson University, New Jersey, USA
- Bachelor of Technology in Information Technology | CSPIT, Gujarat, India

Aug 2021 – May 2023

Aug 2016 – May 2020
